Fig. Vault room EET070 with vault door EWT085

Our consulting team are available to provide you with detail product and technical information.

[Modular Vault Rooms]

Vault rooms are highly complex constructions that must meet a wide range of requirements. Therefore, it is necessary that experienced, reputable specialists are involved early on at the beginning in the planning phase.

Strongroom walls in modular construction consist entirely of prefabricated elements which are assembled on site to form an independent structure (room-in-room system).

The closure of the vault room is completed by the vault door including a prefabricated frame. For every vault room there is a suitable door.

It should be noted that the vault room and the door are selected in the same resistance grade.

Model	Resistance Grade	Security Class	Wall Thickness (mm)	Weight (kg/m ²)
	VdS ECB-S	VSÖ		
AET070	Grade I	Class EN 1	70	200
